Test Report [RT-PCR]

Date and time of reporting (dd/mm/yyyy): 12 hour formate	03.10.2021
Address of the referring facility / Hospital	SKMCH, MUZAFFARPUR
SPECIMEN DETAILS	
Date of onset of illness	—
Date & Time of Sample Collection	02.10.2021
Date & Time of receipt of specimen at VRDL	02.10.2021
Condition of specimen received / Quality on arrival	ACCEPTABLE
REPORTING DETAILS	
Report ID	S-649237/03.10.2021

Sr. No.	Sample ID	Patient Name	Age	Sex	Specimen type	Date of sample testing	Result		
							2019-nCoV	C.T. Value	Other Respiratory viruses
649237	SYS-COV-BI-MZF-20-40469921	RAJEEV RANJAN PD	0	M	Oropharyngeal Swab / Nasopharyngeal Swab	03.10.2021	NEGATIVE		—

Prepared by:

Research Assistant
VRDL SKMC MUZ

Nodal Officer
VRDL SKMC MUZ

Microbiologist
SKMC MUZ

Note: The results relate only to the specimens tested and should be correlated with clinical findings.
Interpretation guidance:-

- ☐ Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.
- ☐ A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection*
- ☐ A positive test result is only tentative, and will be reconfirmed by retesting.
- ☐ Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. *
- ☐ A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- ☐ Please note that these results are not to be used for any thesis or presentations or for Publication in any Journal without the prior permission of the Director General, ICMR

- ☐ Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.
- ☐ A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection*
- ☐ A positive test result is only tentative, and will be reconfirmed by retesting.
- ☐ Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. *
- ☐ A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- ☐ Please note that these results are not to be used for any thesis or presentations or for Publication in any Journal without the prior permission of the Director General, ICMR

**DEPARTMENT OF MICROBIOLOGY
(VIRAL RESEARCH & DIAGNOSTIC LABORATORY)
S. K. MEDICAL COLLEGE, MUZAFFARPUR – 842004**

Test Report [RT-PCR]

Date and time of reporting (dd/mm/yyyy): 12 hour formate	03.10.2021
Address of the referring facility / Hospital	SKMCH, MUZAFFARPUR
SPECIMEN DETAILS	
Date of onset of illness	—
Date & Time of Sample Collection	02.10.2021
Date & Time of receipt of specimen at VRDL	02.10.2021
Condition of specimen received / Quality on arrival	ACCEPTABLE
REPORTING DETAILS	
Report ID	S-649251/03.10.2021

Sr. No.	Sample ID	Patient Name	Age	Sex	Specimen type	Date of sample testing	Result		
							2019-nCoV	C.T. Value	Other Respiratory viruses
649251	SYS-COV-BI-MZF-20-40471455	MUNNA KUMAR	30	M	Oropharyngeal Swab / Nasopharyngeal Swab	03.10.2021	NEGATIVE		—

Prepared by:

Research Assistant
