

Test Report [RT-PCR]

Date and time of reporting (dd/mm/yyyy): 12 hour formate	08.08.2021
Address of the referring facility / Hospital	SKMCH, MUZAFFARPUR
SPECIMEN DETAILS	
Date of onset of illness	
Date & Time of Sample Collection	07.08.2021
Date & Time of receipt of specimen at VRDL	07.08.2021
Condition of specimen received / Quality on arrival	ACCEPTABLE
REPORTING DETAILS	
Report ID	S-526081/08.08.2021

Sr. No.	Sample ID	Patient Name	Age	Sex	Specimen type	Date of sample	Result		
110.					type	testing	2019-nCoV	C.T. Value	Other Respir atory viruses
52608 1	SYS-COV-BI- MZF-20- 34208739	RANJIT KUMAR	32	М	Oropharyngeal Swab / Nasopharyngeal Swab	08.08.2021	NEGATIVE		

Prepared by:

Research Assistant VRDL SKMC MUZ

Nodal Officer VRDL SKMC MUZ

Microbiologist SKMC MUZ

Note: The results relate only to the specimens tested and should be correlated with clinical findings. Interpretation guidance:-

□ Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.

□ A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection*

 \Box *A positive test result is only tentative, and will be reconfirmed by retesting.*

 \Box Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. *

□ A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.

□ A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection*

 \Box *A positive test result is only tentative, and will be reconfirmed by retesting.*

 \Box Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. *

□ A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.

Test Report [RT-PCR]

Date and time of reporting (dd/mm/yyyy): 12 hour formate	08.08.2021
Address of the referring facility / Hospital	SKMCH, MUZAFFARPUR
SPECIMEN DETAILS	
Date of onset of illness	
Date & Time of Sample Collection	07.08.2021
Date & Time of receipt of specimen at VRDL	07.08.2021
Condition of specimen received / Quality on arrival	ACCEPTABLE
REPORTING DETAILS	
Report ID	S-526097/08.08.2021

Sr. No.	Sample ID	Patient Name	Age	Sex	Specimen type	Date of sample	Result		
110.					type	testing	2019-nCoV	C.T. Value	Other Respir atory viruses
52609 7	SYS-COV-BI- MZF-20- 34211073	SMUNDARI DEVI	55	F	Oropharyngeal Swab / Nasopharyngeal Swab	08.08.2021	NEGATIVE		

Prepared by:

Research Assistant VRDL SKMC MUZ

Nodal Officer VRDL SKMC MUZ

Microbiologist SKMC MUZ

Note: The results relate only to the specimens tested and should be correlated with clinical findings. Interpretation guidance:-

□ Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.

□ A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection*

 \Box *A positive test result is only tentative, and will be reconfirmed by retesting.*

 \Box Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. *

□ A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.

Microbiologist SKMC MUZ

Note: The results relate only to the specimens tested and should be correlated with clinical findings. Interpretation guidance:-

□ Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.

□ A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection*

 \Box *A positive test result is only tentative, and will be reconfirmed by retesting.*

 \Box Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. *

□ A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.

52612 8	SYS-COV-BI- MZF-20- 34215541	AMOD KUMAR	29	М	Oropharyngeal Swab / Nasopharyngeal Swab	08.08.2021	NEGATIVE		

Prepared by:

Research Assistant VRDL SKMC MUZ

Nodal Officer VRDL SKMC MUZ

Microbiologist SKMC MUZ

Note: The results relate only to the specimens tested and should be correlated with clinical findings. Interpretation guidance:-

□ Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.

□ A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection*

 \Box *A positive test result is only tentative, and will be reconfirmed by retesting.*

 \Box Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. *

□ A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
