Test Report [RT-PCR]

Date and time of reporting (dd/mm/yyyy): 12 hour formate	30.01.2022
Address of the referring facility / Hospital	SKMCH, MUZAFFARPUR
SPECIMEN DETAILS	
Date of onset of illness	—
Date & Time of Sample Collection	29.01.2022
Date & Time of receipt of specimen at VRDL	29.01.2022
Condition of specimen received / Quality on arrival	ACCEPTABLE
REPORTING DETAILS	
Report ID	S-881299/30.01.2022

Sr. No.	Sample ID	Patient Name	Age	Sex	Specimen type	Date of sample testing	Result		
							2019-nCoV	C.T. Value	Other Respiratory viruses
881299	SYS-COV-BI-MZF-20-53792123	LAKHENDRA MANJHI	28	M	Oropharyngeal Swab / Nasopharyngeal Swab	30.01.2022	NEGATIVE		—

Prepared by:

Research Assistant
VRDL SKMC MUZ

Nodal Officer
VRDL SKMC MUZ

Microbiologist
SKMC MUZ

Note: The results relate only to the specimens tested and should be correlated with clinical findings.
Interpretation guidance:-

- ☐ Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.
- ☐ A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection*
- ☐ A positive test result is only tentative, and will be reconfirmed by retesting.
- ☐ Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. *
- ☐ A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- ☐ Please note that these results are not to be used for any thesis or presentations or for Publication in any Journal without the prior permission of the Director General, ICMR

Interpretation guidance:-

- ☐ Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.
- ☐ A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection*
- ☐ A positive test result is only tentative, and will be reconfirmed by retesting.
- ☐ Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. *
- ☐ A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- ☐ Please note that these results are not to be used for any thesis or presentations or for Publication in any Journal without the prior permission of the Director General, ICMR

Nodal Officer
VRDL SKMC MUZ

Microbiologist
SKMC MUZ

Note: The results relate only to the specimens tested and should be correlated with clinical findings.
Interpretation guidance:-

- ☐ Testing of referred clinical specimens was considered on the basis of request / referral received from / through State Surveillance Officer (SSO) of concerned State Integrated Disease Surveillance Programme (IDSP)/ any other health care facility affirming requirements of the case definition/s.
- ☐ A single negative test result, particularly if this is from an upper respiratory tract specimen, does not exclude infection*
- ☐ A positive test result is only tentative, and will be reconfirmed by retesting.
- ☐ Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2 – 4 days after the collection of the first specimen for additional testing if required. *
- ☐ A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- ☐ Please note that these results are not to be used for any thesis or presentations or for Publication in any Journal without the prior permission of the Director General, ICMR

Test Report [RT-PCR]

Date and time of reporting (dd/mm/yyyy): 12 hour formate	30.01.2022
Address of the referring facility / Hospital	SKMCH, MUZAFFARPUR
SPECIMEN DETAILS	
Date of onset of illness	—
Date & Time of Sample Collection	29.01.2022
Date & Time of receipt of specimen at VRDL	29.01.2022
Condition of specimen received / Quality on arrival	ACCEPTABLE
REPORTING DETAILS	
Report ID	S-881328/30.01.2022
